A
ρ_c = 0.0133 (SNIC), second fold 0.126
Honest umpire fraction y
Rotation rate ρ
stable equilibrium
unstable equilibrium
limit-cycle range of y
time-averaged y
B
fitted slope -0.478
Period (model time)
Distance to the fold, $\rho_c - \rho$
period of the cycle
slope -1/2
C
Two-parameter diagram (x: Hopf points)
Rotation rate ρ
Exploration rate $\mu = \nu$
A = 2.0: fold creating honest state
A = 2.0: second fold
A = 2.0: small-mu formula
A = 0.7: fold creating honest state
A = 0.7: second fold
A = 0.7: small-mu formula
